

Powerful. Simple. Affordable.

Engineering Firm Case Study 1

CLIENT: A large, regional, engineering firm with over 15 locations. Monthly fixed telecom spending averages \$20,000 and mobile telecom spend averages \$25,000 per month. The client processes over 15 very complex bills per month.

CHALLENGE: The client was very organized in analyzing their telecom spending, but the time involved to process them manually conflicted with other department objectives. The client was looking to reduce staff time and to improve reporting accuracy and thoroughness.

RESOLUTION: iTEMize was a quick, simple, and affordable solution to reduce the time spent tracking costs in spreadsheets, and manually assigning the charges to cost centers. iTEMize also made it really easy to automatically generate key management reports. Estimated time saved: 8 hours per month. The client has been able to realize an excellent ROI based on the time savings alone.

“12 percent to 20 percent of telecom charges are in error, and 85 percent of the errors are in the carrier’s favor.”

Gartner

Your Trusted **TEM**-mate

Inventory Management

iTEMize lets you track all your telecom services and equipment—both fixed and mobile—by user, location, or department.

Financial Management

iTEMize flags billing variances to validate your invoices. It also saves more money and time by allowing easy access to important financial details, trends, and reports. You control who can pay bills and where costs are allocated. You can even create output for your general ledger and accounts payable systems.

Contract & Dispute Management

iTEMize provides a central repository for important contract information that can even notify you via email about contract renewals. You can create disputes, email them to suppliers, and set reminders and actions. You'll never lose control again!
